

Cut out the patterns as shown. You will need no less than 3 petals and no more than 5. Choose petals in order of size. The last two petals are the same size so only pick one of the two. Use a thumb tack to make a hole in the center to transfer to metal. Once the patterns are traced to metal, drill out the center hole to $\frac{1}{4}$ ", then cut the patterns out with snips careful not to cut yourself and to round all the edges nicely. Next, see Conley for further instructions.
